

Stored Procedure

1. 首先進入到資料庫內
2. 進入您想要使用 Stored Procedure 的 Database 裡面
3. 開始 Coding Stored Procedure 如下範例

```
DROP PROCEDURE IF EXISTS GetAllProducts;  
DELIMITER //  
CREATE PROCEDURE GetAllProducts(fuseid int(10))  
BEGIN  
    DECLARE Registername VARCHAR(255);  
    SET Registername = (select userid from member where id = fuseid);  
    delete from member_relation_ship where friendid = fuseid;  
    delete from member_relation_ship where memberid = fuseid;  
    delete from room_members where memberid = fuseid;  
    delete from member where id = fuseid;  
    delete from sip_buddies where secret = Registername;  
END //  
DELIMITER ;
```

4. CALL GetAllProducts(想要刪除的 id 號碼);
